FUNCTION: Accessory protein for MHC class-II antigen/
receptor interaction. May regulate T-cell activation.
SUBUNIT: Associates with p56-location.
SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Contains 3 immunoglobulin-like C2-type dom
SIMILARITY: Contains 1 immunoglobulin-like V-type dom

-: FUNCTION: Accessory protein for MHC class-II antigen/T-cell receptor interaction. May regulate T-cell activation.

-: SUBUNIT: Associates with p56-lck (By similarity).

-: SUBCELLULAR LOCATION: Type I membrane protein.

-: SIMILARITY: Contains 1 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hashimoto O., Tatsumi M.;

May regulate T-cell activation. SUBUNIT: Associates with p56-lck (By similarity). SUBCELLULAR LOCATION: Type I membrane protein. SIMILARITY: Contains 3 immunoglobulin-like C2-type domains. SIMILARITY: Contains 1 immunoglobulin-like V-type domains.

May regulate T-cell activation.
-I- SUBUNIT: Associates with p56-lck (By similarity).
-I- SUBCELLULAR LOCATION: Type I membrane protein.
-I- SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
-I- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fomsgaard A., Hirsch V.M., Johnson P.R.; "Cloning and sequences of primate CD4 molecules: diversity cellular receptor for simian immunodeficiency virus/human

May regulate T-cell activation. SUBUNIT: Associates with p56-lck (By similarity) SUBCELLULAR LOCATION: Type I membrane protein. SIMILARITY: Contains 3 immunoglobulin-like C2-type domains. SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                European
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SWISS-PROT entry is copyright.
